

Diamond Stores In Dallas

Diamond Stores In Dallas

Three Stone Diamond Solitaire Ring. There are MANY more ring styles similar that we can create as a custom jeweler. This ring is only one example. Please note that prices are not listed because there are MANY factors that influence the base price of a ring including ring size, diamond size(s), type of metal casted, etc. Call to set up a private appointment.

Diamond Color

Diamond color is one of four major characteristics that are considered when determining a diamond's quality and value. They are known as the Four C's, and the remaining three are, and carat weight. Understanding these four diamond characteristics—color, clarity, and cut—and how they interact can help you select a diamond that suits your tastes and your pocketbook.

Diamond Color Variations

Diamonds are not all truly colorless, but it's the colorless diamonds, sometimes called *white* diamonds, which all other shades are judged against. The Gemological Institute of America (GIA) has devised a set of guidelines to grade diamond color. The color of graded diamonds is compared to the color of control stones, preselected gems of a specific color.

What do you provide if I want to insure my jewelry

We provide you with a written detailed evaluation and receipt for jewelry purchased. In the event of loss or theft, this record will assist in compiling an inventory of your jewelry. We also specialize in insurance replacements if your jewelry is lost or stolen.

Are your diamonds conflict free?

Diamonds are meant to be a gift of love, and we abhor the way in which some gems have been used to fund conflict. To stop this practice, governments, our industry and human rights groups created the Kimberley Process in 2002, which today ensures that over 99% of all rough diamonds come from sources free from conflict.

Do you sell Canadian diamonds?

Yes we do. If the diamonds are Canadian, it will be noted in the description of the jewelry. As our inventory is constantly changing, you can always contact us with a specific request.

Summing Up Diamond Color

A diamond's color grade affects its price, but it isn't the most important diamond characteristic to consider before purchasing a diamond. If your budget prevents you from buying a D through F graded diamond it does not mean you can't own a beautiful gemstone.

Diamond grades G through J can be fine gems and other grades may be perfectly suitable. An experienced jeweler can help you evaluate and select the best diamond for your needs.

Diamond, composed of carbon, is the hardest natural substance in the world. Each carbon atom is surrounded by four neighboring carbon atoms in a tetrahedral coordination that is the result of a covalent bond and a face-centered arrangement in the cubic unit cell. Diamond is in the isometric crystal system, which is reflected in the commonly found octahedral or cubic crystal form.
